

— AI-NATIVE APPLICATION SECURITY

# See everything. Fix what matters.

The AI security engine that scans every line you ship in seconds — then remediate only the threats that are real.

NVIDIA INCEPTION

MICROSOFT FOR STARTUPS

GITLAB TECHNOLOGY PARTNER

# A hundred alarms a day. Ninety-three are false.

Real threats hide inside the noise. Teams burn out chasing ghosts — and the one that actually bites walks straight through.

# Noise is never free.

---

## Hours

Engineers spend their days triaging false alarms instead of building the product.

---

## Trust

Cry wolf often enough and people stop looking — so the real alert gets ignored too.

---

## Breaches

Buried under thousands of findings, the one exploitable flaw ships to production.

# What if you only saw the one that's real?

847 findings → **34 that matter** → **19 fixes**

One scan • 42 seconds

# Meet AquilaX.

One AI-native platform — guarding your software from the first commit to the running cloud.

## ASPM

Code-to-cloud risk, one view

## CSPM

Live cloud posture, continuous

## AI Auto-Fix

Validated fixes, opened as PRs

## MCP Server

Security inside your AI editor

# Commit to clean in under 60 seconds.

**REAL RUN** Filtered 847 → **34 findings** · **19 fix PRs** · **42s**

# An engine that learns your code.

Securitron reads the actual code path — not a regex — to tell a true threat from a false alarm. No rule tuning. It sharpens with every scan you run.

 ASPM

**Securitron AI** locks onto the few findings that are real **847 → 34**

# Clean code is only half the job. Guard the cloud it lands in.

The same engine keeps watching after deploy — auditing live AWS, Azure, GCP and Kubernetes for drift, IAM attack paths and runtime threats.

# Legacy AppSec vs AquilaX.

## LEGACY TOOLS

## AQUILAX

### SCANNING

✘ One dimension, run in sequence

✔ 32 engines, all in parallel

### SPEED

✘ Hours — sometimes days

✔ Under 60 seconds, every push

### NOISE

✘ Endless false positives to triage

✔ 93.54% filtered before you see it

### FIXING

✘ Hand-written by your developers

✔ AI patch, validated, opened as a PR

### PRICE

✘ Premium licences, per-scan fees

✔ 20–30% less + a permanent free tier

# Built by the people who defended the giants.

## THE PEDIGREE

Founded by AppSec leaders from **Goldman Sachs** and **Revolut**.

Advised by former CISOs of **AVIVA, HSBC & VISA**

“

*AquilaX has fundamentally changed how we handle AppSec at scale. The parallel scanning approach combined with AI noise reduction is exactly what modern security teams need.*

**Gunwant Singh** — Security · Fivetran · Ex AppSec @ Barclays

— PRICING

# Start free. Scale when you're ready.

Unlimited scans on every plan · no per-scan fees, ever · Enterprise & on-prem on request

## FREE

# \$0

forever · no card

- ✔ Secrets & PII scanning
- ✔ Compliance auditing
- ✔ Unlimited scans
- ✔ CI/CD + IDE integration

## PREMIUM

# \$19

per month

- ✔ Everything in Free
- ✔ SAST · SCA · DAST
- ✔ Container + IaC + API
- ✔ 7 scan engines total

## ULTIMATE

# \$99

per month · 14-day trial

- ✔ Everything in Premium
- ✔ Malware + Vibe Code
- ✔ Securitron AI engine
- ✔ AI auto-remediation
- ✔ CSPM + on-prem
